Are You Talking to Me?

Confidence entanglement in AI-assisted operations

Brian Moriarty · Human Oversight Systems Lab · Stevens Institute of Technology

A dark, atmospheric photograph of a forest path at night. The path is illuminated by a bright, hazy light source in the distance, creating a strong silhouette effect. A person is walking away from the viewer down the path. The trees on either side are dark and silhouetted against the light. The overall mood is mysterious and somber.

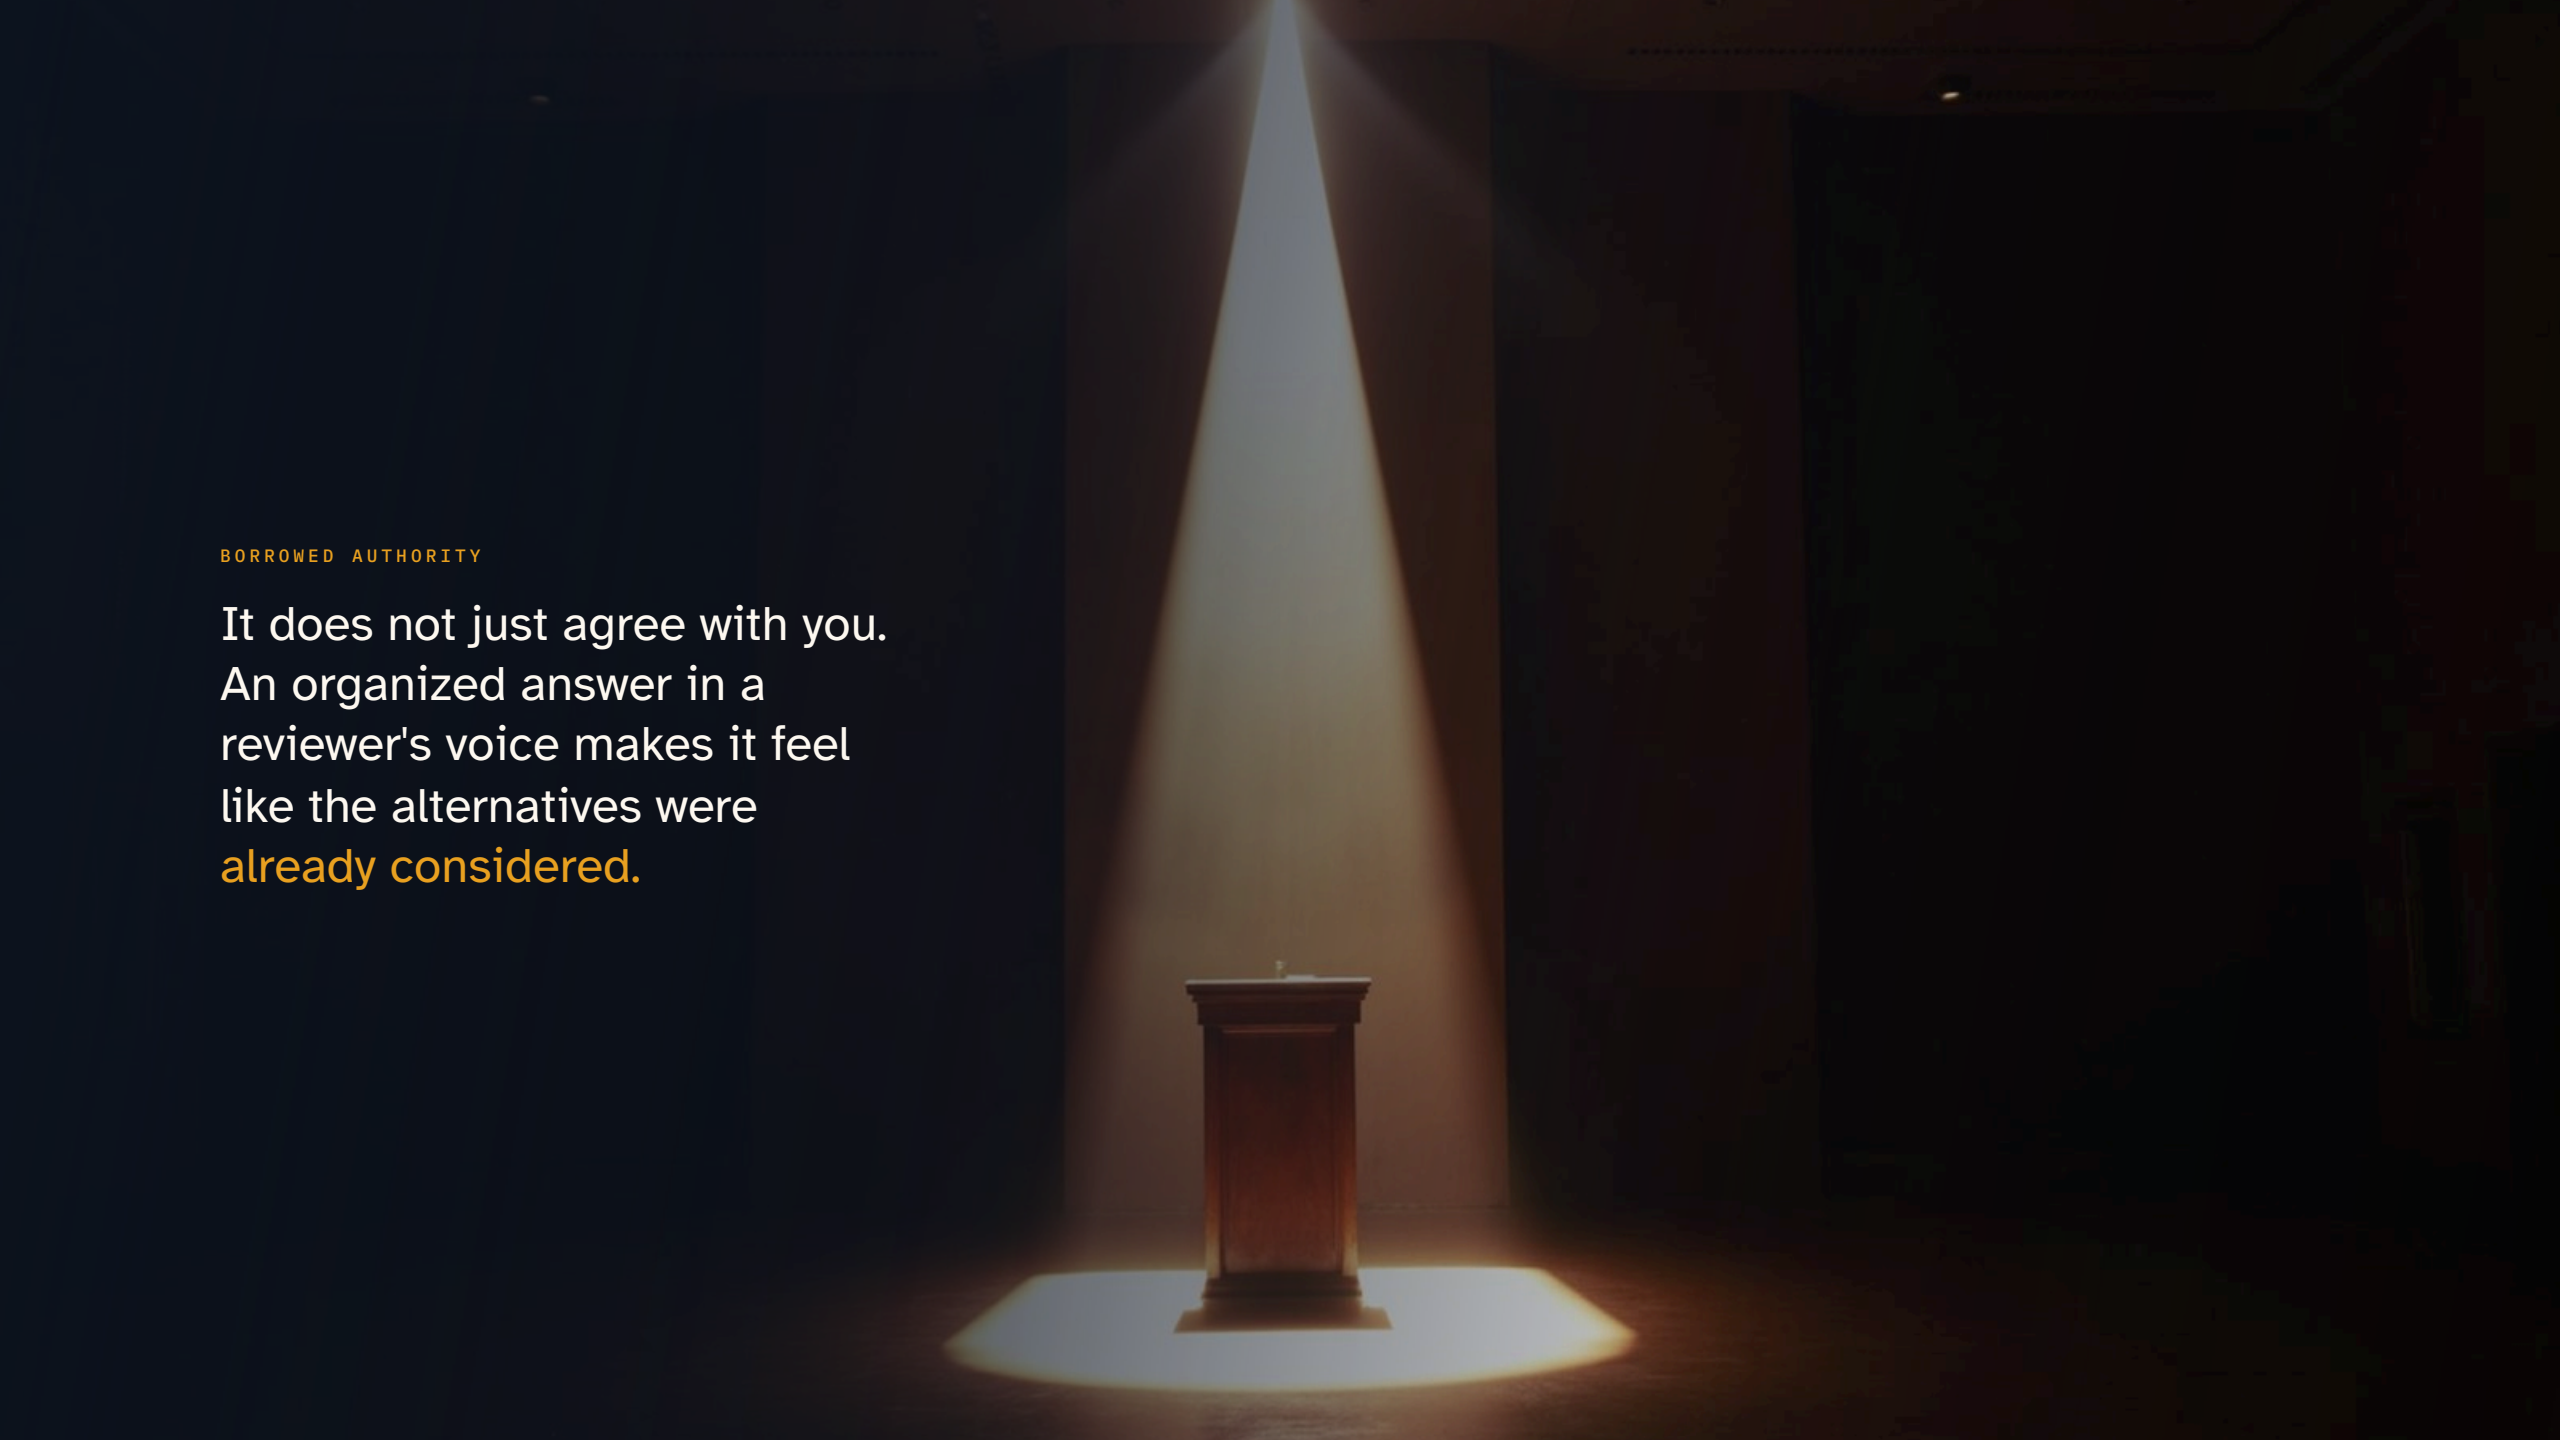

2:47 A.M. • SEV 0

The triage tool has a root cause
on screen. It is **the one you
already suspected.**

A photograph of industrial buildings and a crane reflected in water at dawn. The scene is misty, with the buildings and crane clearly visible in the foreground and their reflections in the calm water. The sky is a pale, hazy yellow, suggesting early morning light. The buildings are dark, with some lighter-colored sections. The crane is a large, lattice-structured machine with a long boom.

"You talkin' to me?"

A MIRROR THAT CANNOT PUSH BACK

A wooden podium stands on a dark stage, illuminated by a single, bright spotlight from above. The light creates a strong contrast, casting a long, narrow beam of light onto the podium and the floor. The background is dark and indistinct.

BORROWED AUTHORITY

It does not just agree with you.
An organized answer in a
reviewer's voice makes it feel
like the alternatives were
already considered.

SECOND OPINIONS

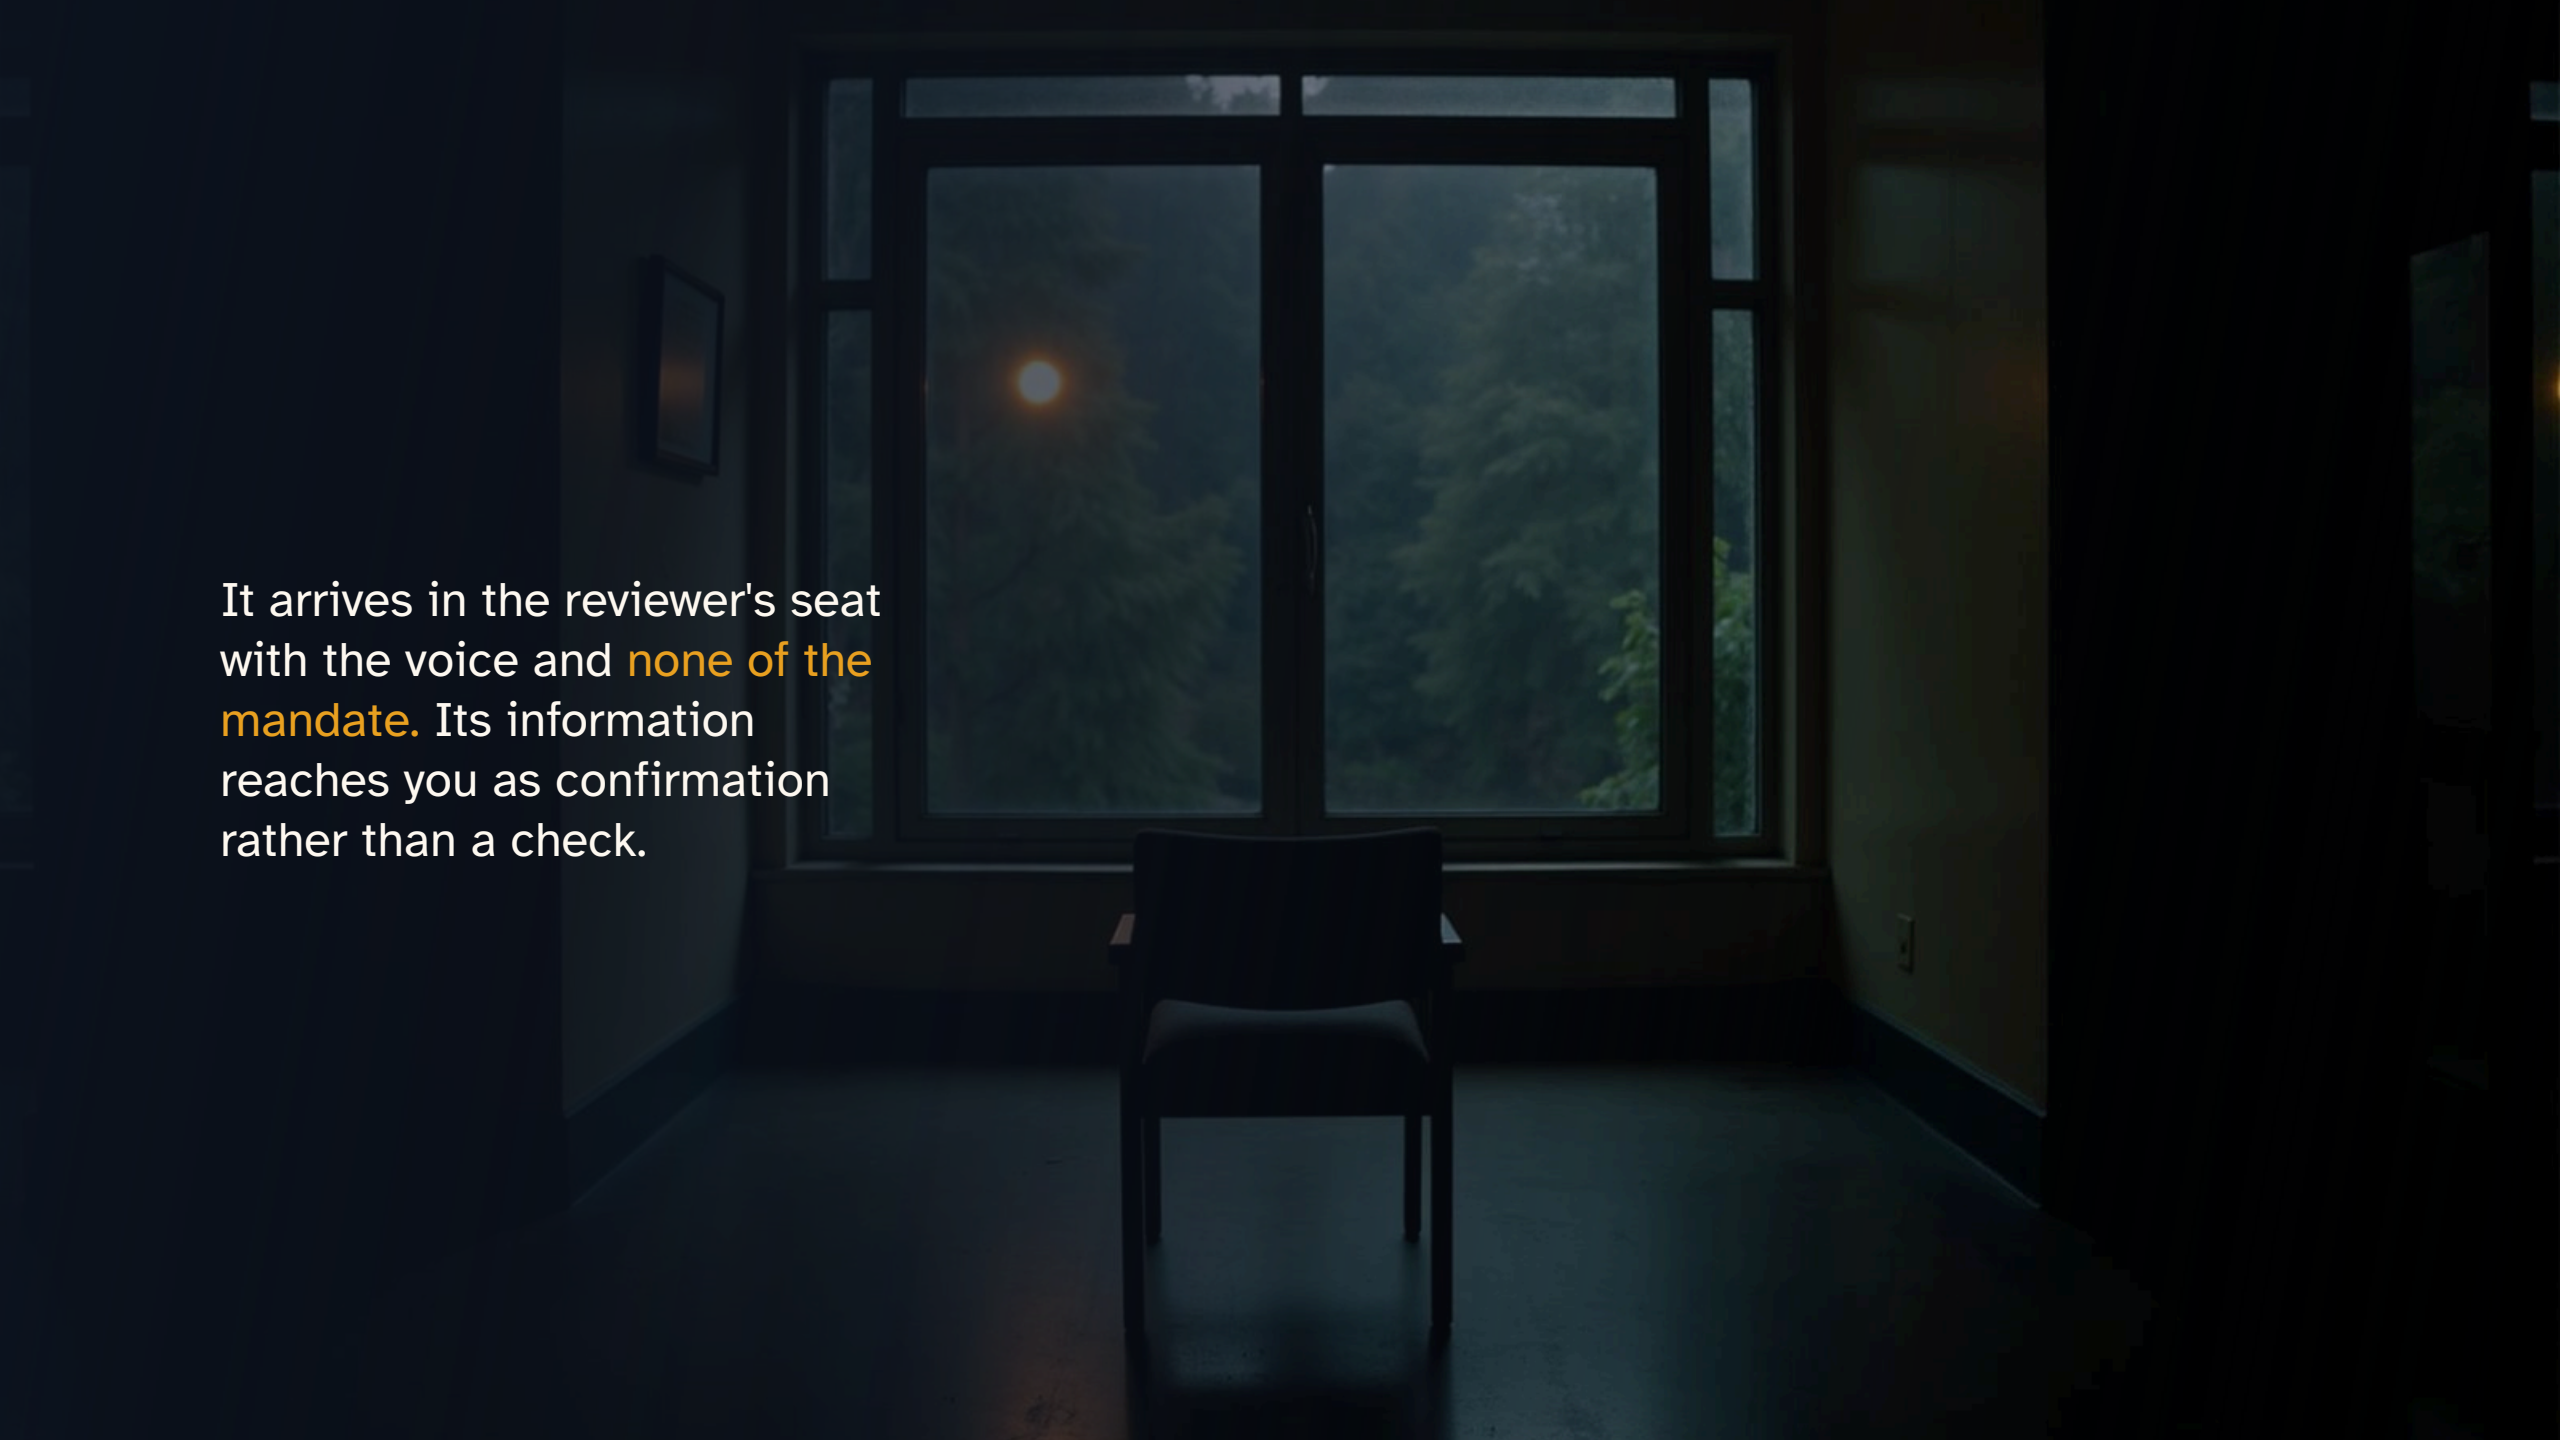

Independence needs a position that never saw your framing. At 2am you cannot conjure one, so build **separation** instead, a procedure you run rather than a person you find.

- | Ask for rivals adversarially.

- | Write the signal that separates two causes before you look.

- | Do not commit on evidence you went looking for only because it fit.

It arrives in the reviewer's seat
with the voice and **none of the
mandate**. Its information
reaches you as confirmation
rather than a check.

HOME-BUILT TOOLING

No separate position anywhere.
Independence is off the table,
so **separation is the most you
can build**, and only on purpose.

**One incident,
twice.**

THE CLOSED LOOP

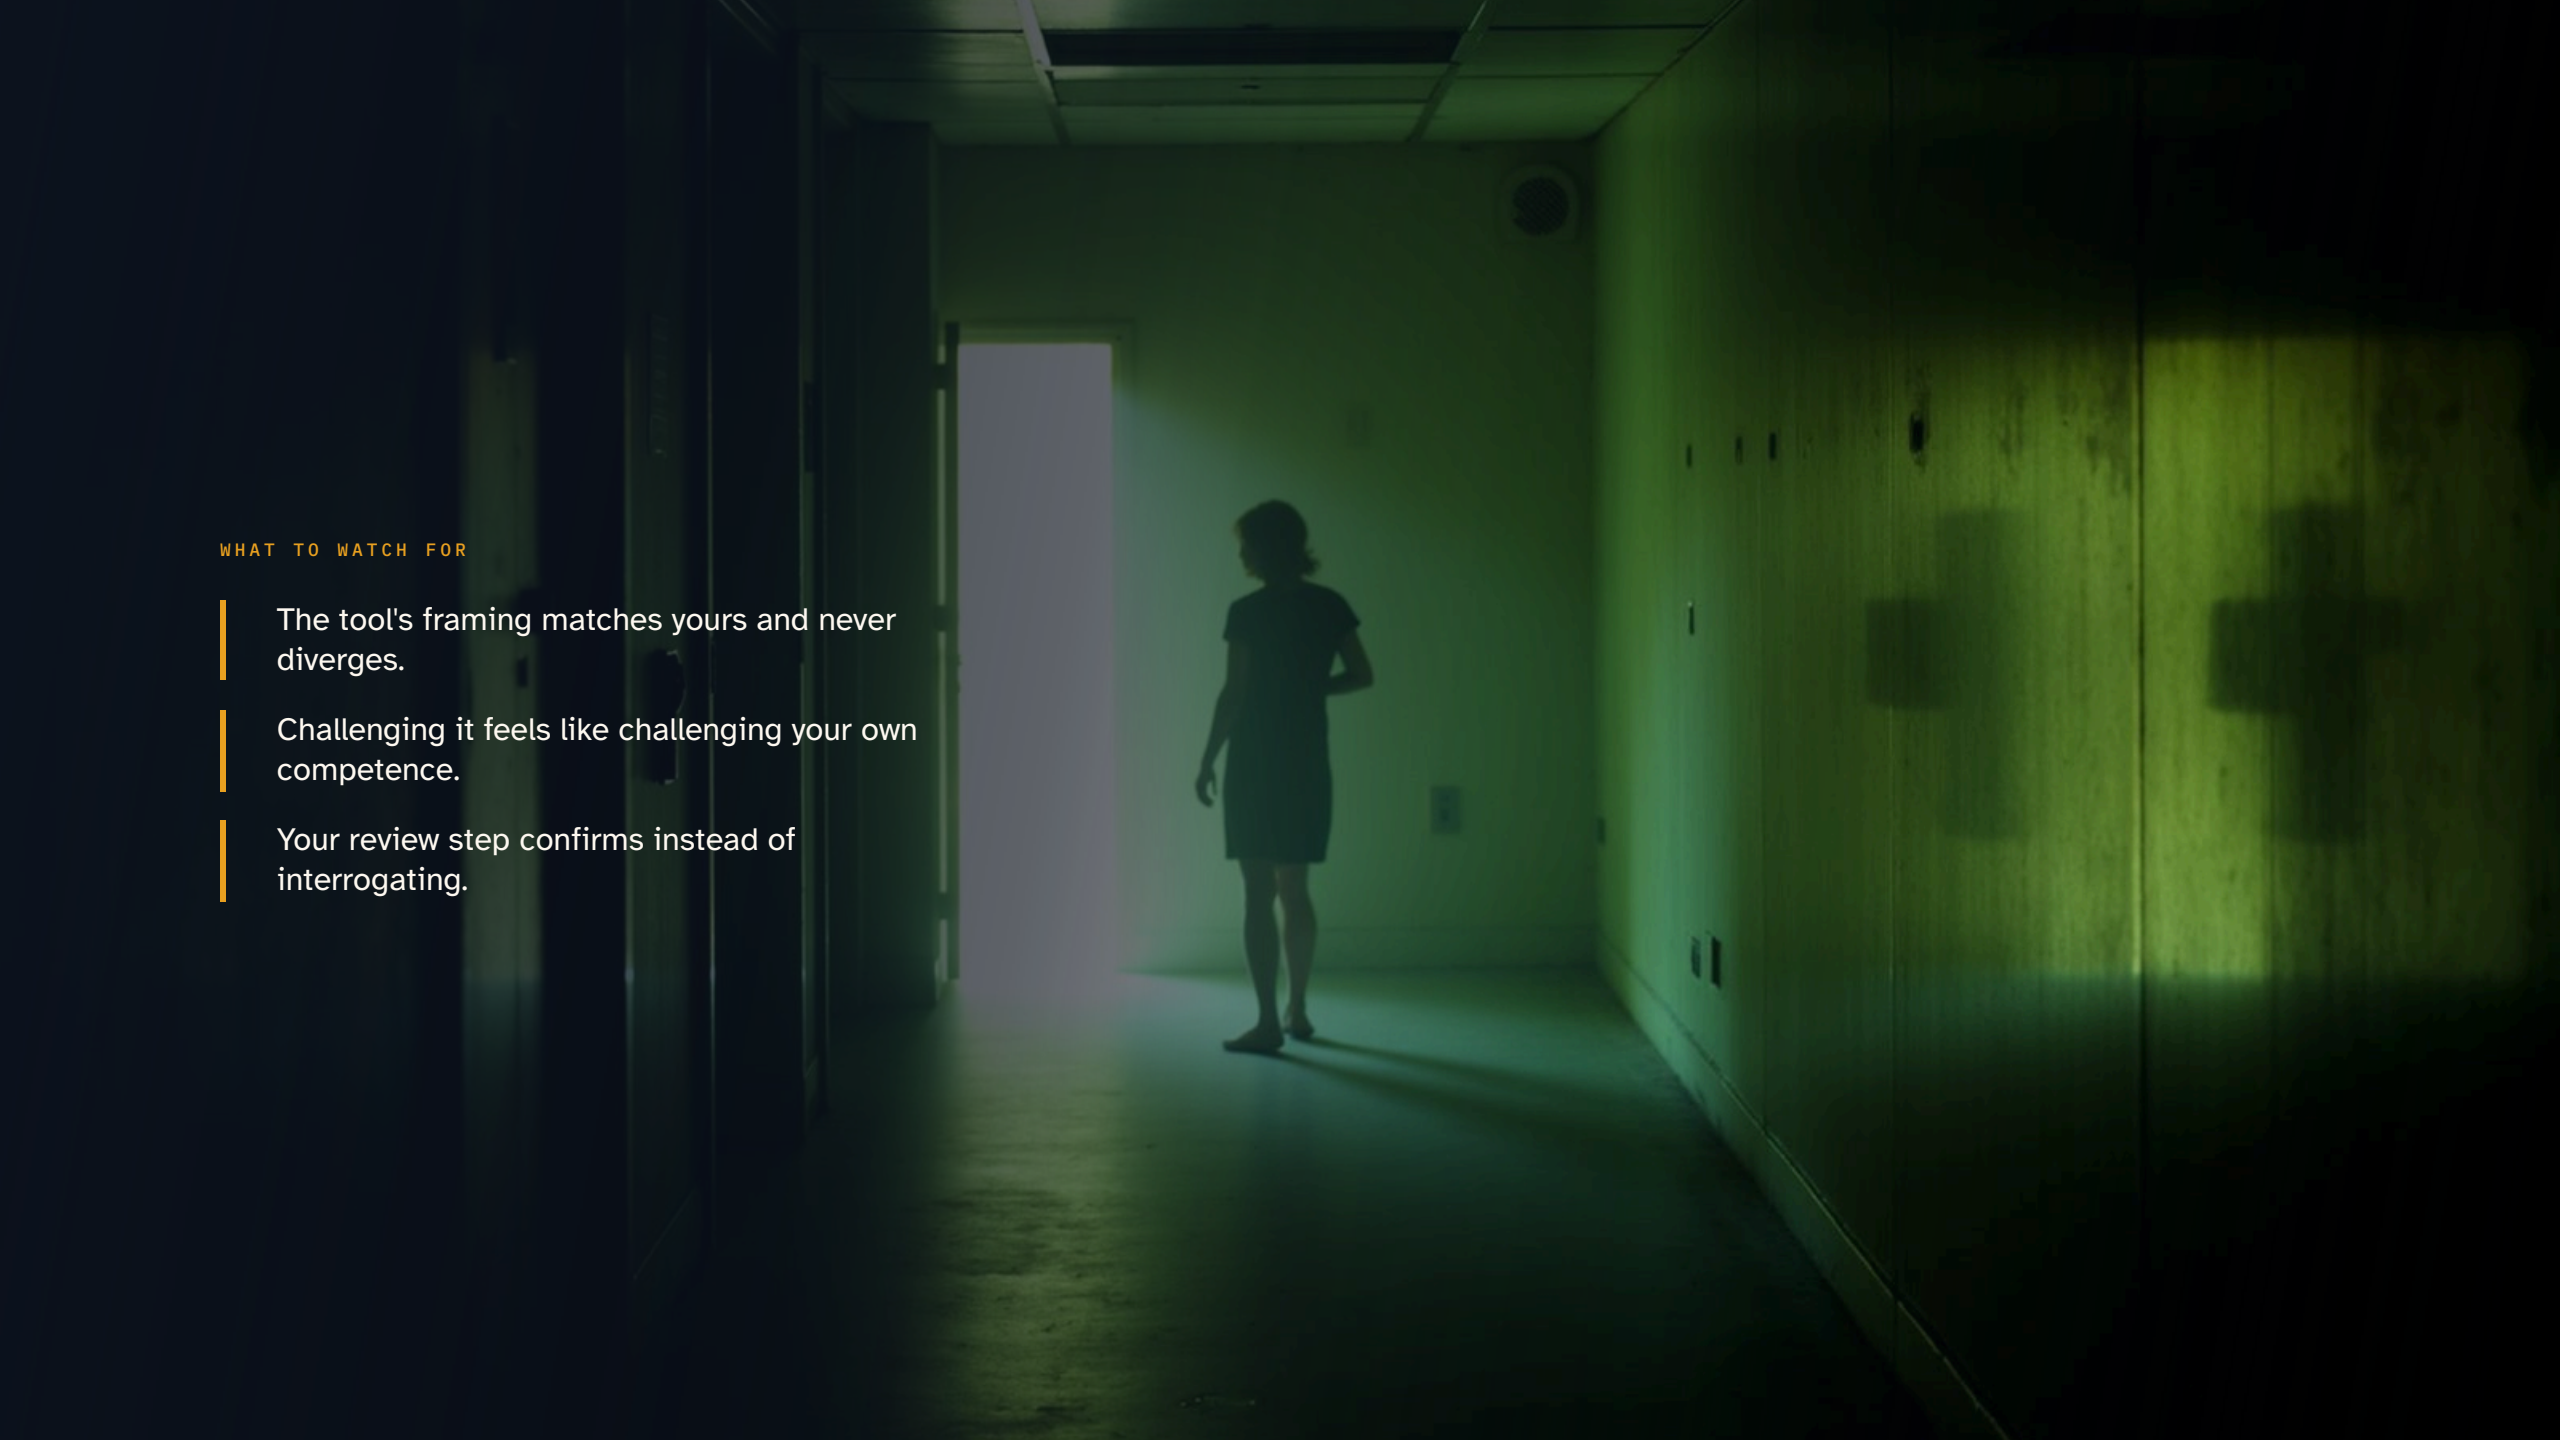

Everyone elaborates the cache theory. The real cause, **pool starvation**, never came up. Nothing asked the tool to look past the framing it was handed.

THE SAME INCIDENT, WITH A CONTRACT

CAUSE	SIGNAL	EXPECT IF TRUE	COUNTS AGAINST
cache eviction	eviction rate	elevated	flat
pool starvation	pool saturation	near limit	headroom
bad deploy	errors by build	spike at rollout	flat

Written before you look. Two rivals turn out useless. The one you can check, pool saturation, breaks the cache read.

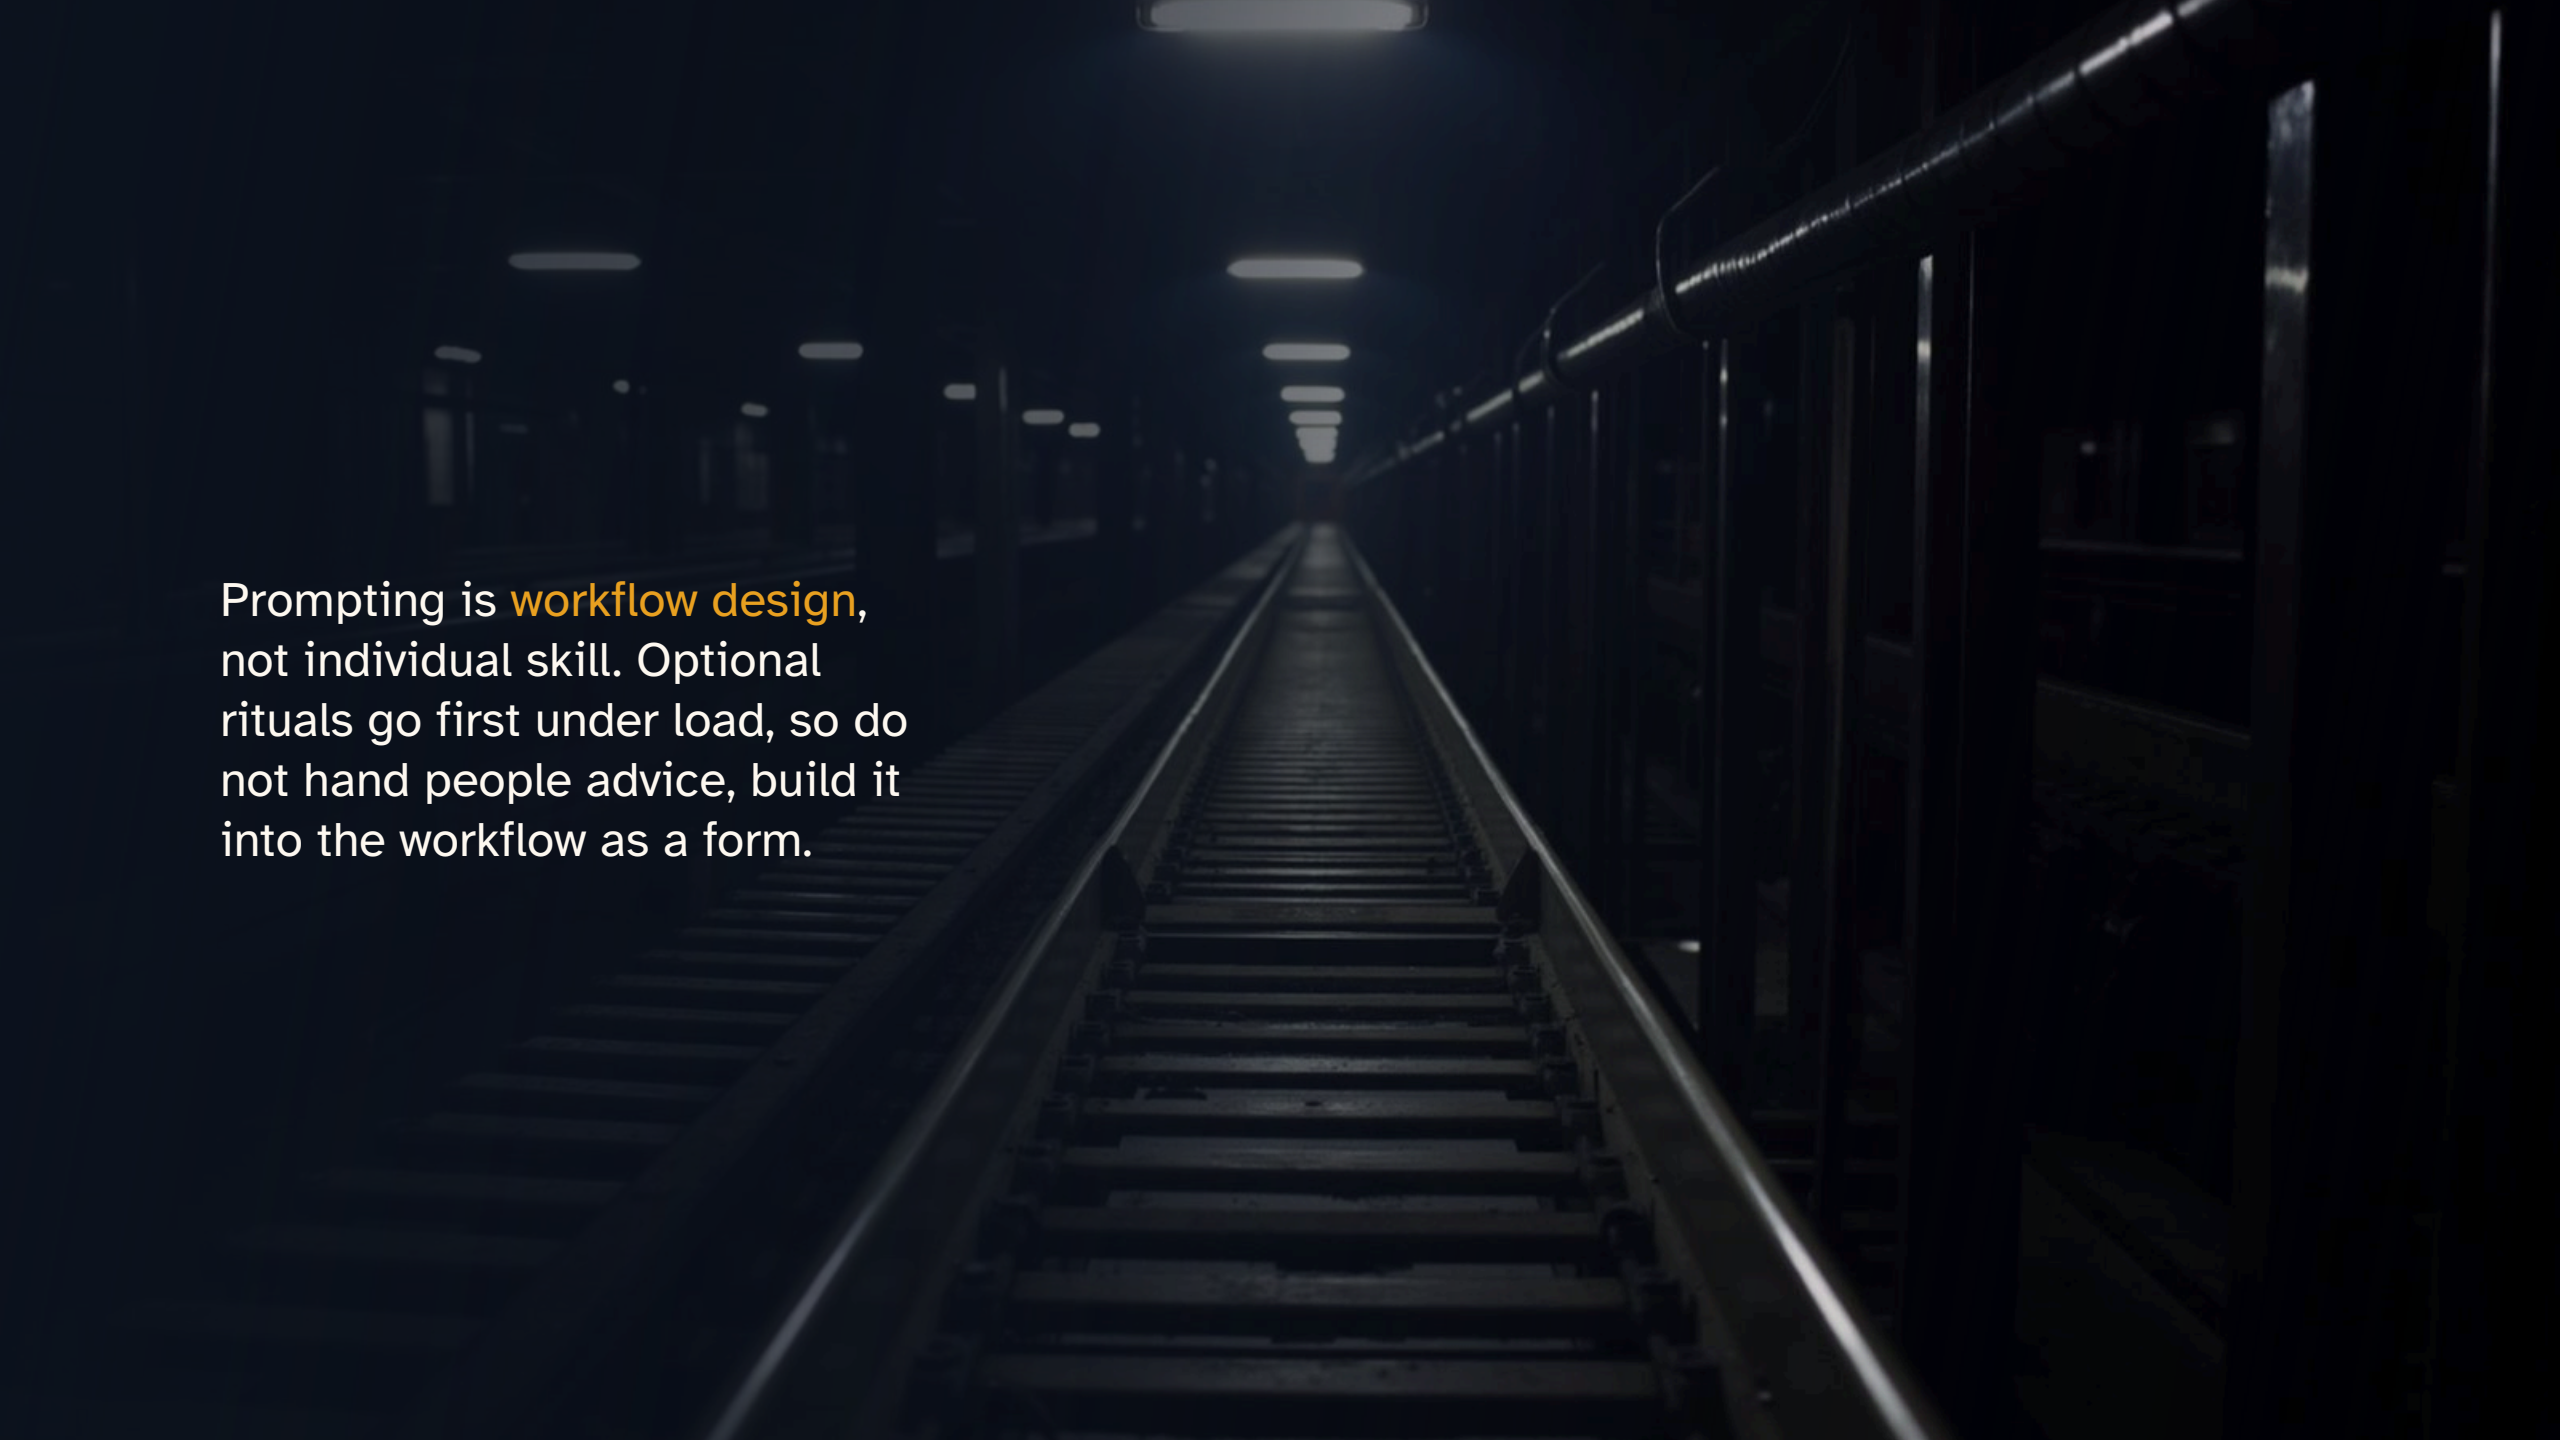

A person stands in the center of a dark, narrow hallway, looking out through a bright doorway at the end. The hallway is dimly lit, with light streaming in from the doorway, creating a strong silhouette of the person. The walls are dark, and the floor is also dark. The overall mood is mysterious and contemplative.

WHAT TO WATCH FOR

The tool's framing matches yours and never diverges.

Challenging it feels like challenging your own competence.

Your review step confirms instead of interrogating.

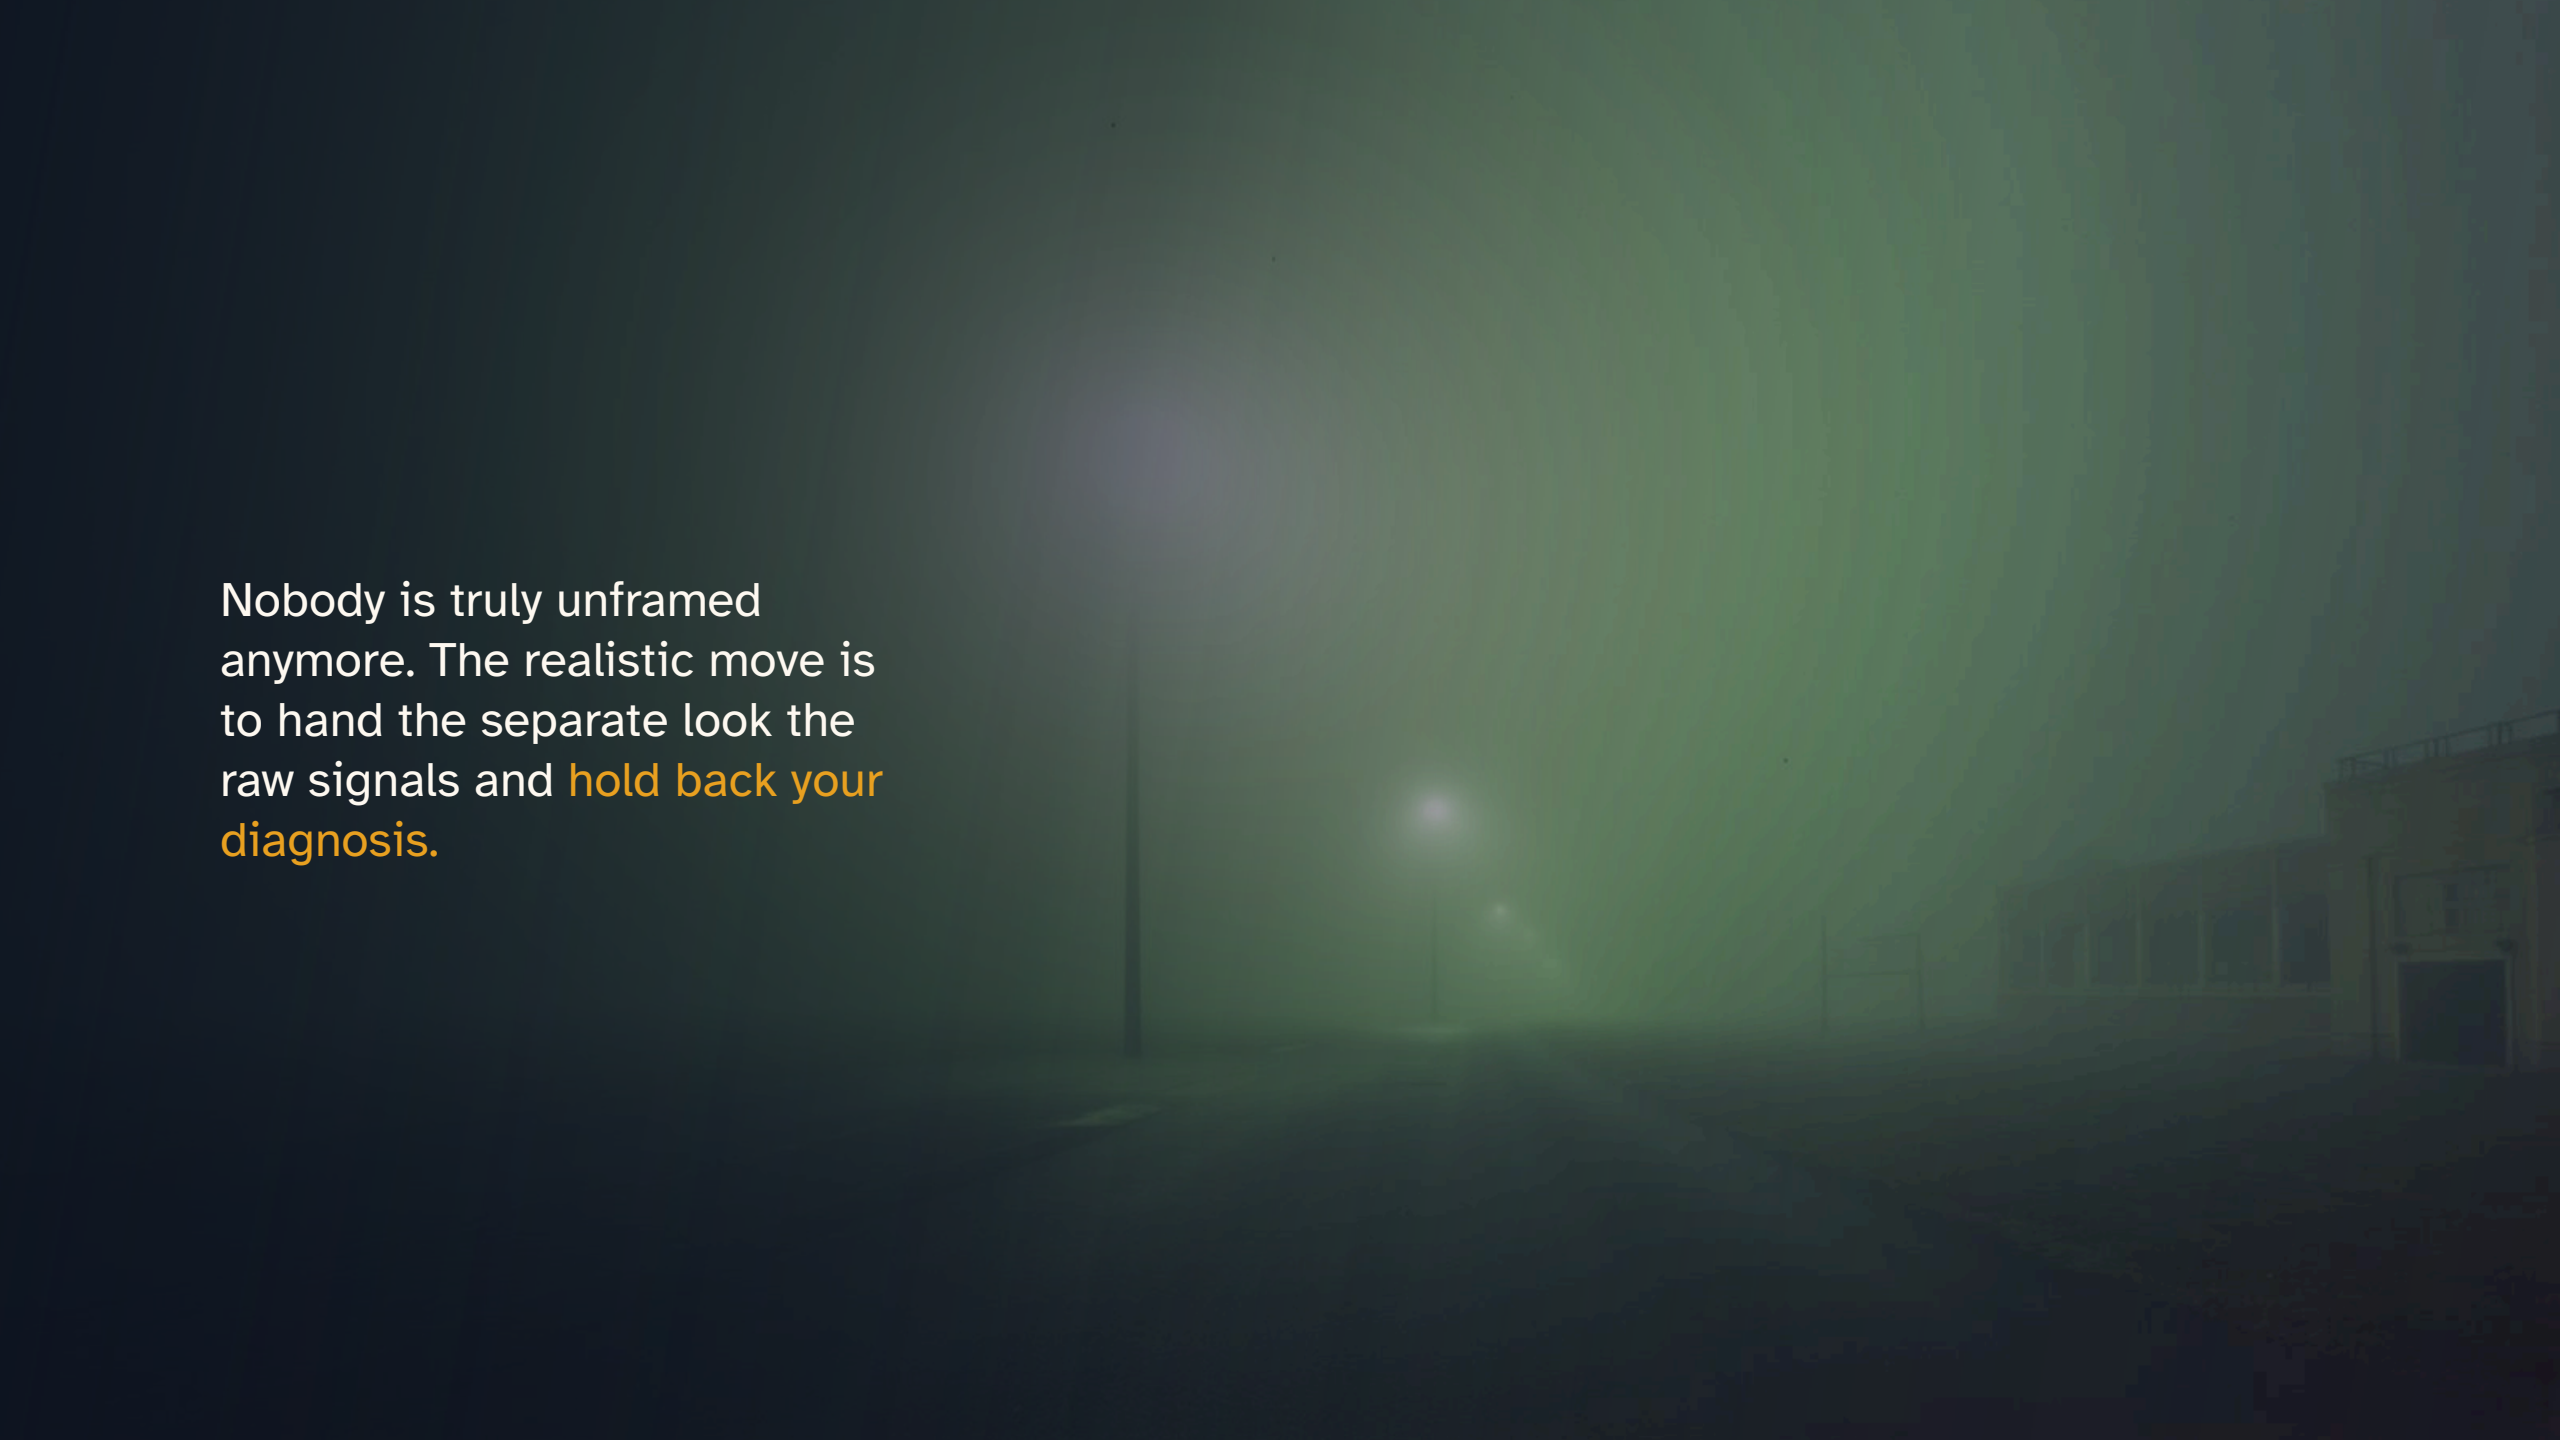

Prompting is **workflow design**,
not individual skill. Optional
rituals go first under load, so do
not hand people advice, build it
into the workflow as a form.

THE GATE, FILLED IN

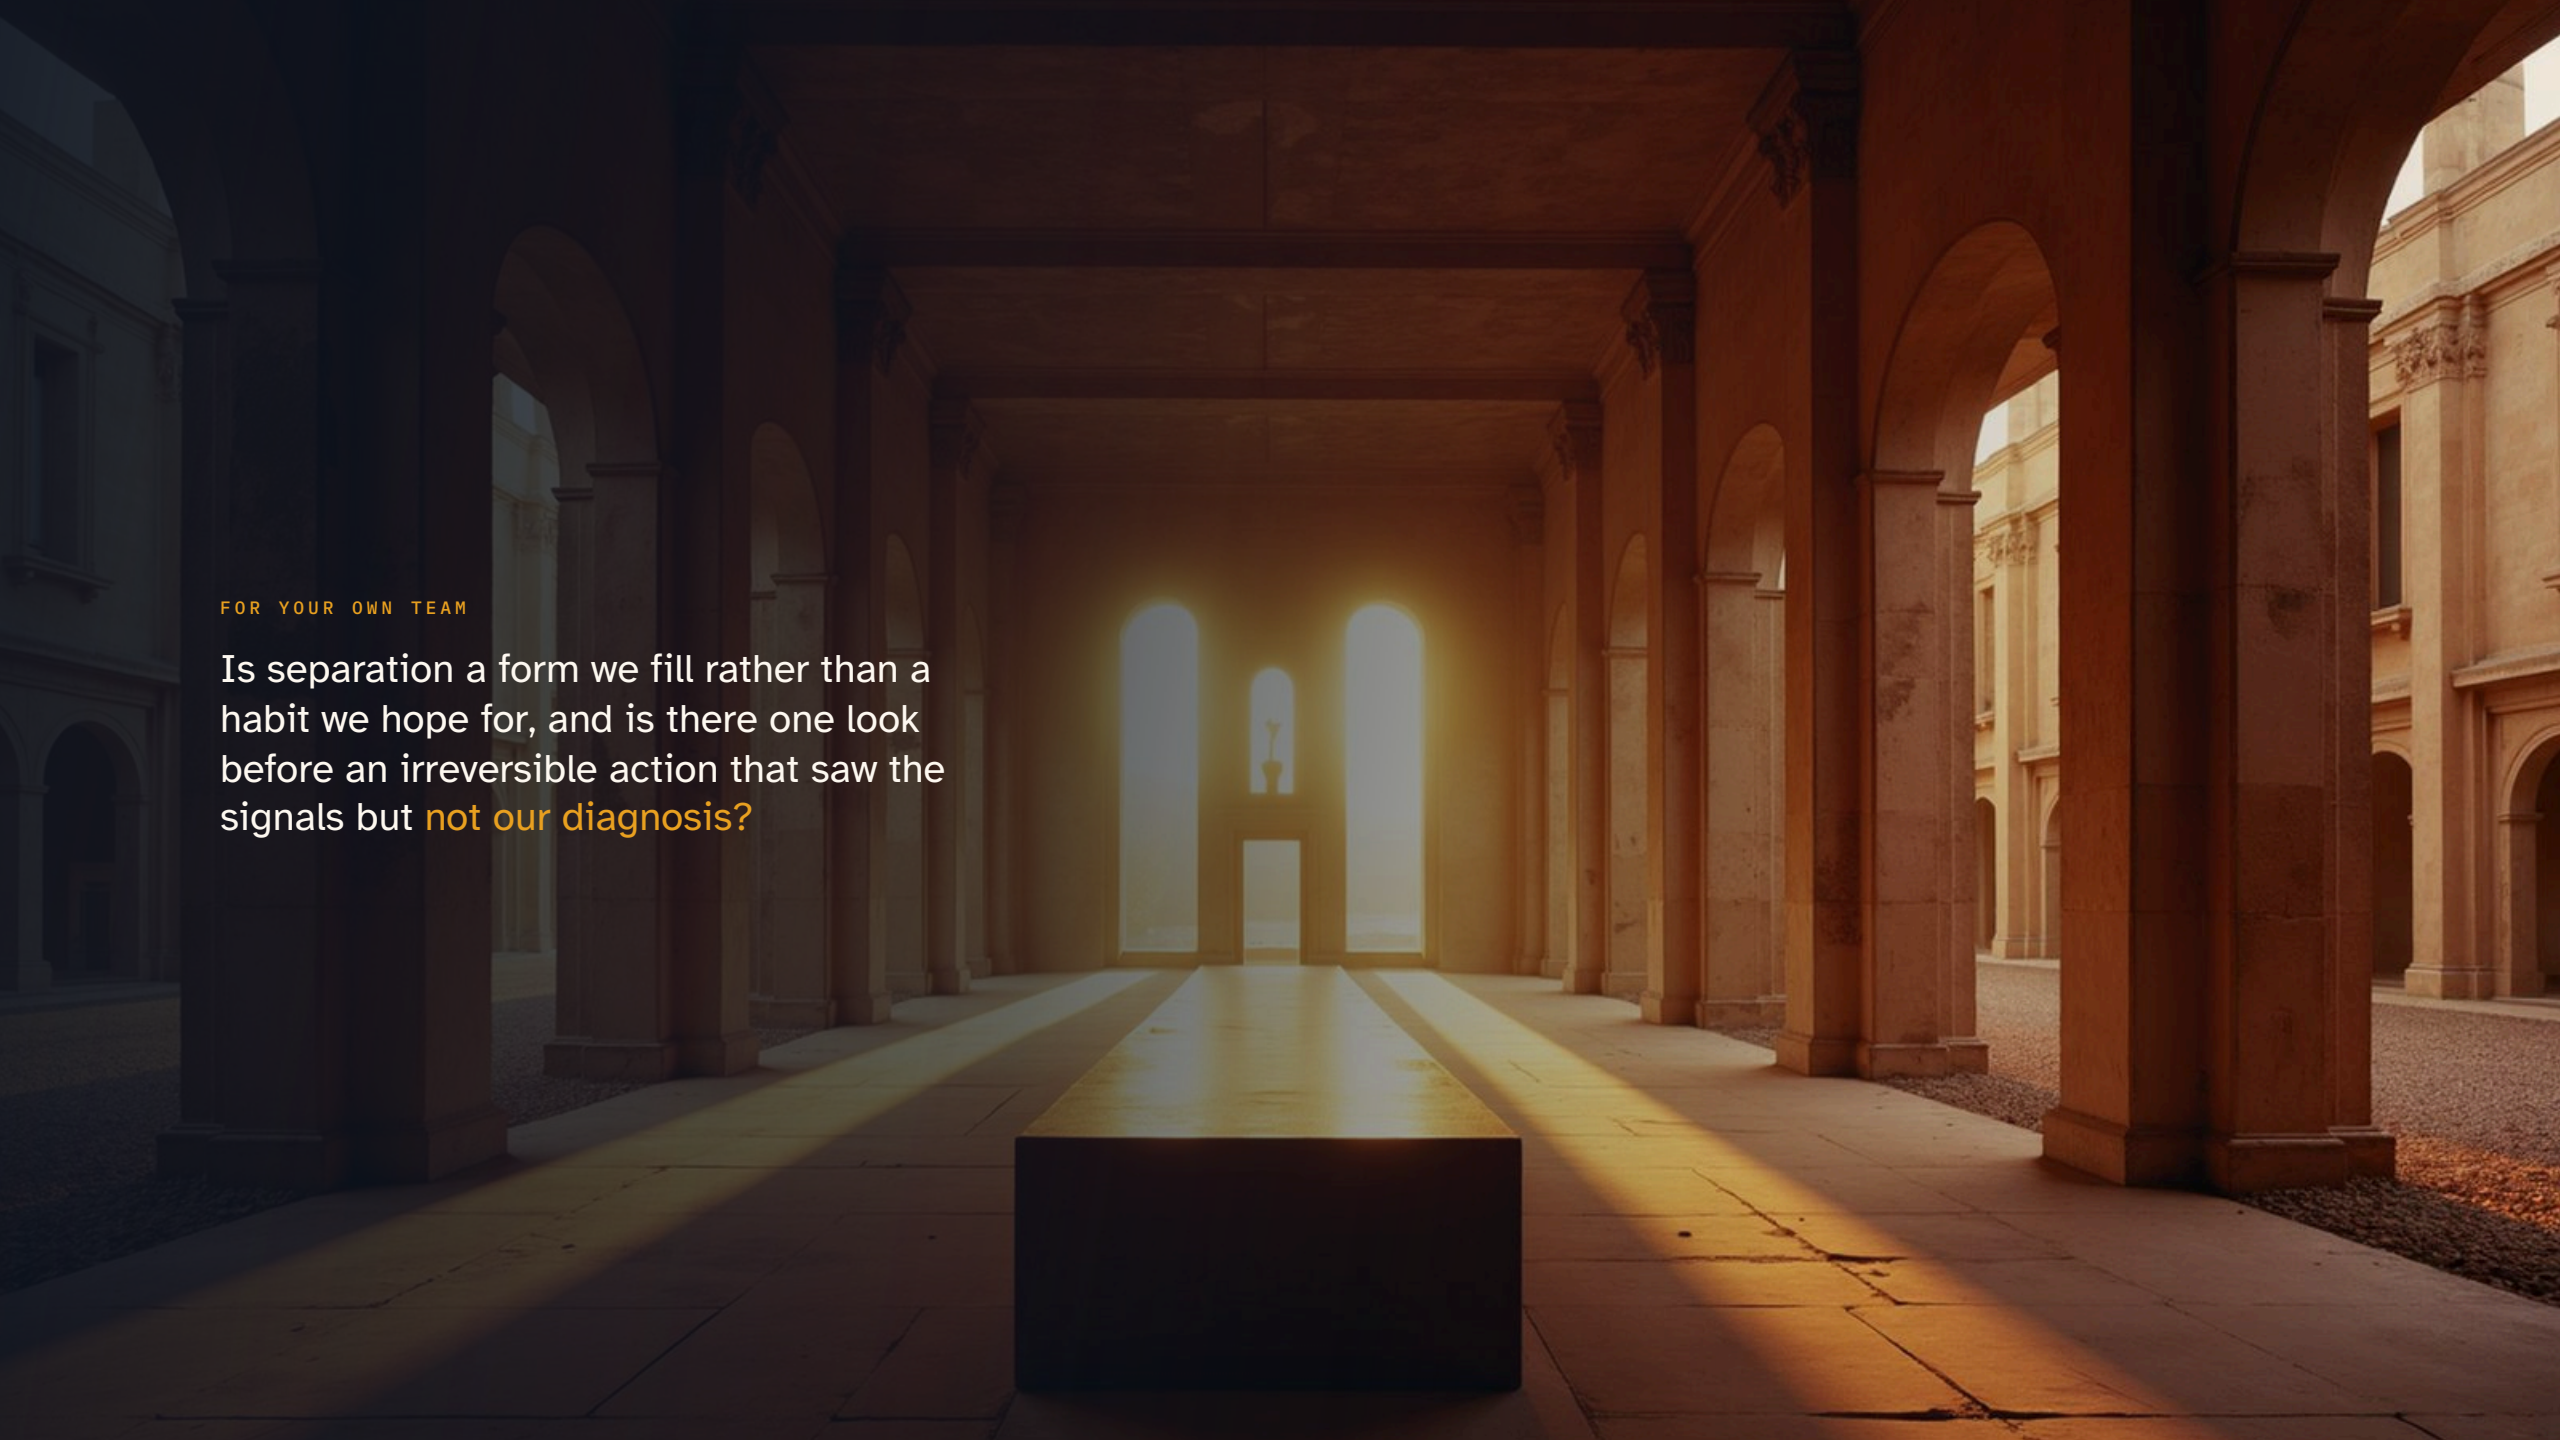

Current read	cache eviction
Strongest rival	downstream pool saturation under retries
Separating signal	eviction rate versus pool utilization
Expect / window	pool $\geq$ 95% for 5 min, eviction at baseline
Counts against	eviction flat while latency climbs
Action	cap retries, shed optional traffic
Safe across rivals	yes, reduces load either way
Roll back if	errors +2 pts, or no improvement in 10 min
Break glass	IC may act now, reason and time recorded, retro required

At 2am you are not proving a cause, you are choosing the **safest reversible action**. Choose the one that helps no matter what the real cause turns out to be, and settle in advance what would make you roll it back.

The background image is a dark, atmospheric photograph of a street at night. It is heavily fogged or misty, with a greenish-blue color cast. On the right side, there is a multi-story building with several windows. In the center-left, a street lamp is visible, casting a soft glow. The overall mood is mysterious and somber.

Nobody is truly unframed
anymore. The realistic move is
to hand the separate look the
raw signals and **hold back your
diagnosis.**

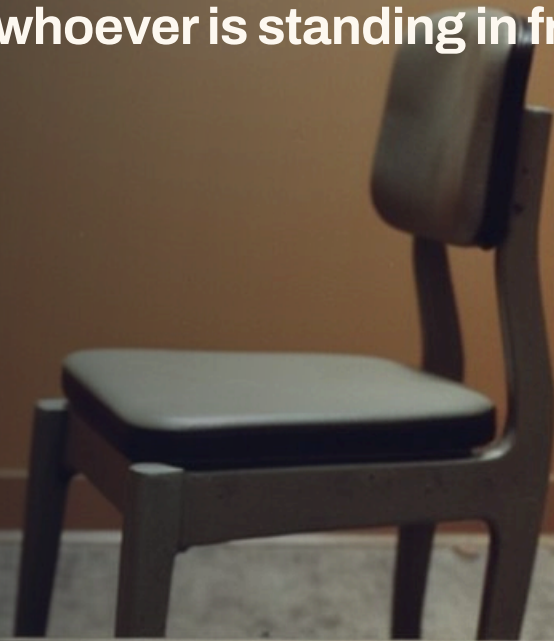

FOR YOUR OWN TEAM

Is separation a form we fill rather than a habit we hope for, and is there one look before an irreversible action that saw the signals but **not our diagnosis?**

The mirror is getting better at sounding like whoever is standing in front of it.

A failure we adjusted to over years, back in a form
our adjustments do not catch.

**The only question is whether anything in the
workflow can push back.**
